Overview

The business and economy is now very much driven by information technology. Technology has overcome various processes and human involvement is restricted to the level of development of system flow, incorporating monitoring mechanisms and ensuring compliance. It is now necessary for professionals in general and accounting and finance professionals in particular to enhance their knowledge and skills in the area of information technology which is directly and indirectly adding value to their tasks.

There are various tools that can help accounting professionals to bring effective corporate governance and transparency in day to day financial transactions, however, selection of application depends on the size of the business. There are some universally accepted applications catering all sizes of businesses from small to large enterprises. One of such tools is SAP S/4 HANA which is greatly accepted to ensure best practices with possibilities to customize according to tailor made requirements while meeting global benchmarks. The organizations, that so far have not adopted Enterprise Resource Planning (ERP), are now seriously considering to adopt one of SAP S/4 HANA tools. Those organizations which have already adopted SAP S/4 HANA in any from are trying to bring continuous improvement to ensure its integration with various business models.

At its deepest roots, business growth is tightly intertwined with digital transformation. With intelligent technologies such as advanced analytics, artificial intelligence (AI), and Internet of Things (IoT) businesses are reinventing themselves. For thousands of SAP customers, the path to such business transformation is best navigated with SAP S/4 HANA. SAP S/4 HANA i.e. SAP Business Suite for HANA is an intelligent, integrated SAP S/4 HANA system that runs on in-memory database, HANA i.e. High Performance Analytical Appliance.

SAP S/4 HANA address industry-specific requirements with proven best practices for 26 verticals and enable new business models as marketplace evolves. It revolutionizes business processes with intelligent automation supported by artificial intelligence and robotic process automation. It is helping enterprises make better decisions faster with embedded analytics, a conversational interface, and digital assistants.
