

Seminar on **Artificial Intelligence and Data Science**

CPD committee of Faisalabad branch council is pleased to announce seminar on artificial intelligent and data analysis.

Artificial intelligence (AI) and its subdomains Machine learning and Data Science are transforming not only the way we do business but also changing the way we live and interact. Its applications are everywhere from Object detection to Speech recognition, from medical diagnosis to text analysis, from predictive maintenance of machines to recommender systems. AI techniques are being used to make critical business decisions and have become an integral part of many consumer products and services. AI developers and data scientists are creating software to anticipate the needs of customers and users through a combination of pattern recognition and data mining.

What will you Learn?

This seminar will cover concepts of Supervised Learning, Unsupervised Learning, and recent state of the art Deep learning techniques. It will also give an overview what it means to be a data scientist, how data science can be used for business, requirements to build machine learning and data science projects and how to start adopting data science within your organisation. The seminar aims to provide participants a foundation to jump-start in the field of data science and machine learning.
